DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 2-10-04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to regarding foreign patent and non-patent literature has not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 1762

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 8-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Zou et al.

Zou et al appears to anticipate a method for producing a perpendicular magnetic recording medium. There is a cobalt-containing magnetic film, forming a protective layer, heating the layers at atmospheric pressure (col 17, lines 13-17), and where the heating temperature is no higher than 250 degrees Celsius (col 15, lines 43-44). There may be formed a HCP structure before the formation of the magnetic film (col 5, lines 35-42).
